# Overview

- Motivation and Introduction
- Talk-aloud Procedure
- Analysis and Discussion
- Summary and Future Direction

# Motivation and Introduction

# Newtonian Concepts

- Force Concept Inventory (FCI)
  - Traditional (Trad) vs. Matter & Interactions (M&I)
  - M&I performance quite a bit worse
  - Gain scores calculated (post-pre)
  - Items yielded up to a 25% difference in gain scores
  - Ten items for further investigation

# Students' Perspective

- Question: “What are they thinking?”
  - Want to understand thought process, reasoning
  - Approach to problem solving
- Use systematic methodology
  - Quantify this information
  - Analyze data
- Greater insight

# Talk-aloud Procedure

# Talk-aloud Protocol

- Before experiment
  - Recruited and trained participants
- During experiment
  - Solved 10 FCI questions
  - Video/audio recorded
- After experiment
  - Transcribed
  - Developed coding system
  - Analyzed data

# Results and Discussion

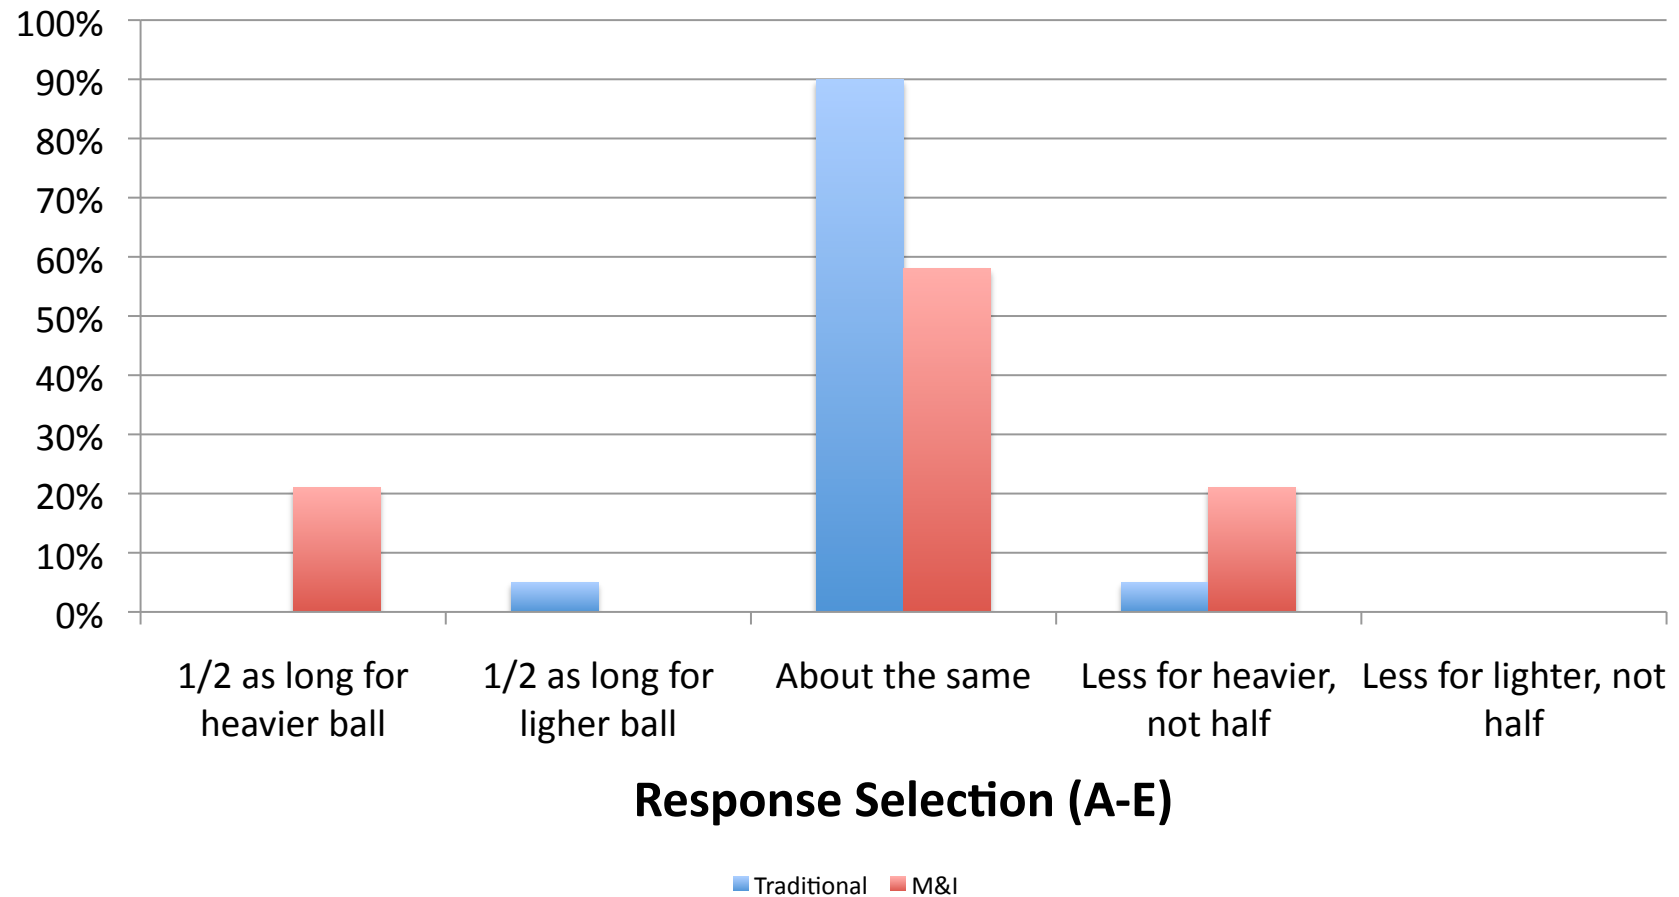

# Item #8

Two metal balls are the same size but one weighs twice as much as the other. The balls are dropped from the roof of a single story building at the same instant of time. The time it takes the balls to reach the ground below will be:

- (A) about half as long for the heavier ball as for the lighter one.
- (B) about half as long for the lighter ball as for the heavier one.
- (C) about the same for both balls.
- (D) considerably less for the heavier ball, but not necessarily half as long.
- (E) considerably less for the lighter ball, but not necessarily half as long.

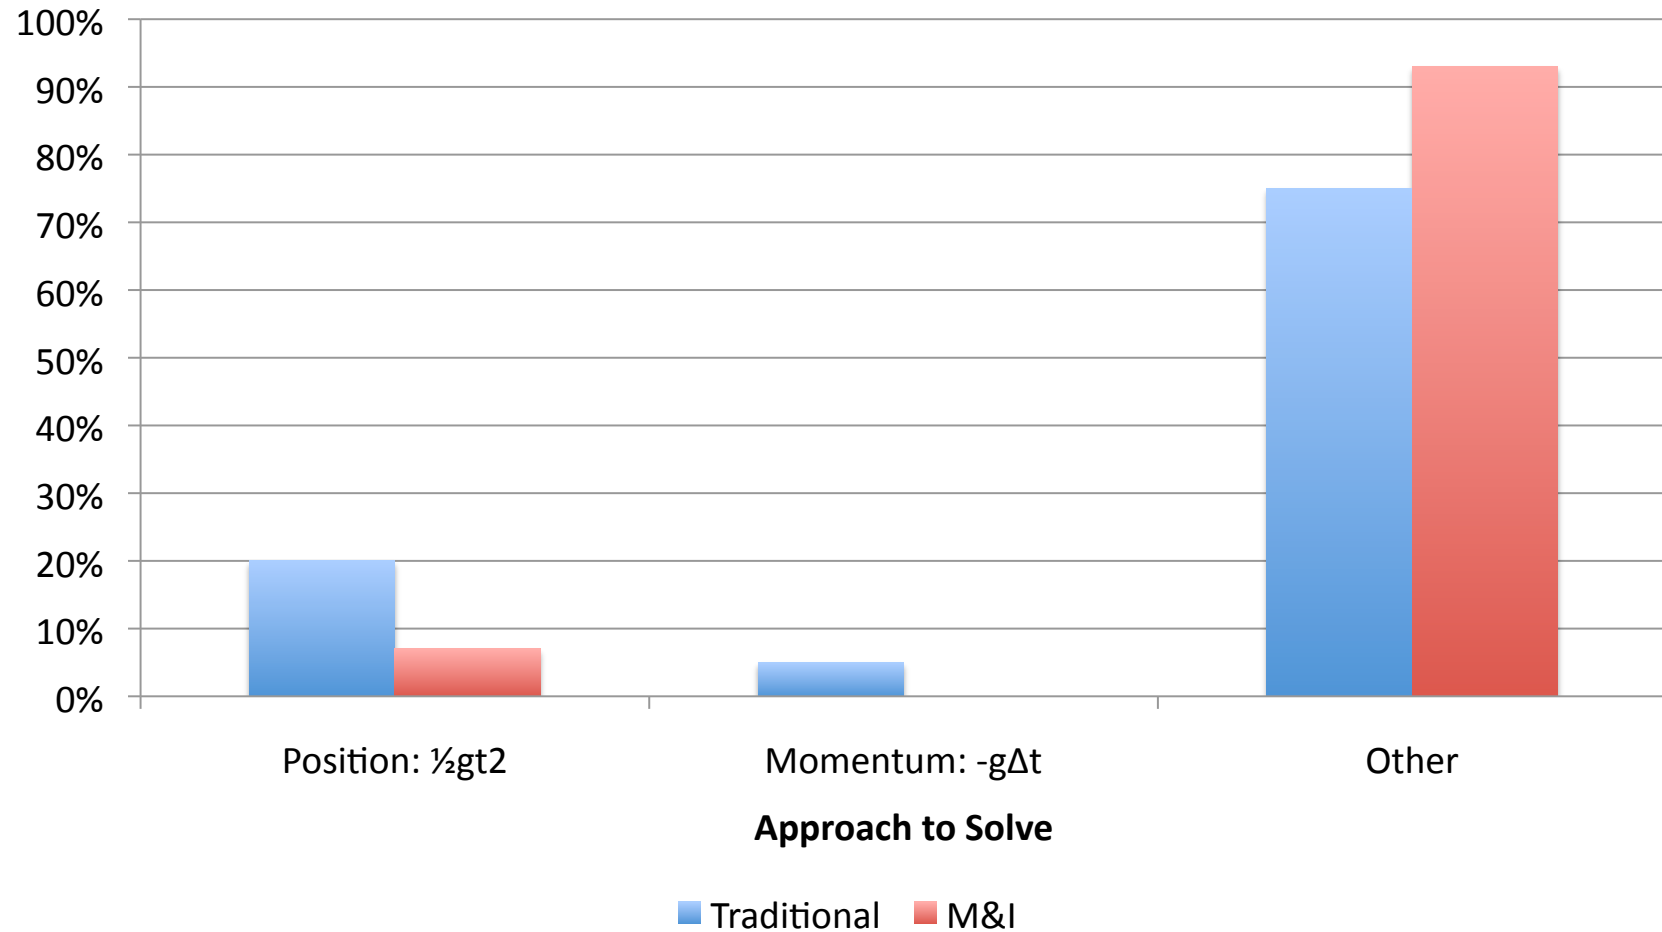

Metal balls ( $m_1 > m_2$ ) dropped,  
Time to reach ground...

# Response Fingerprint

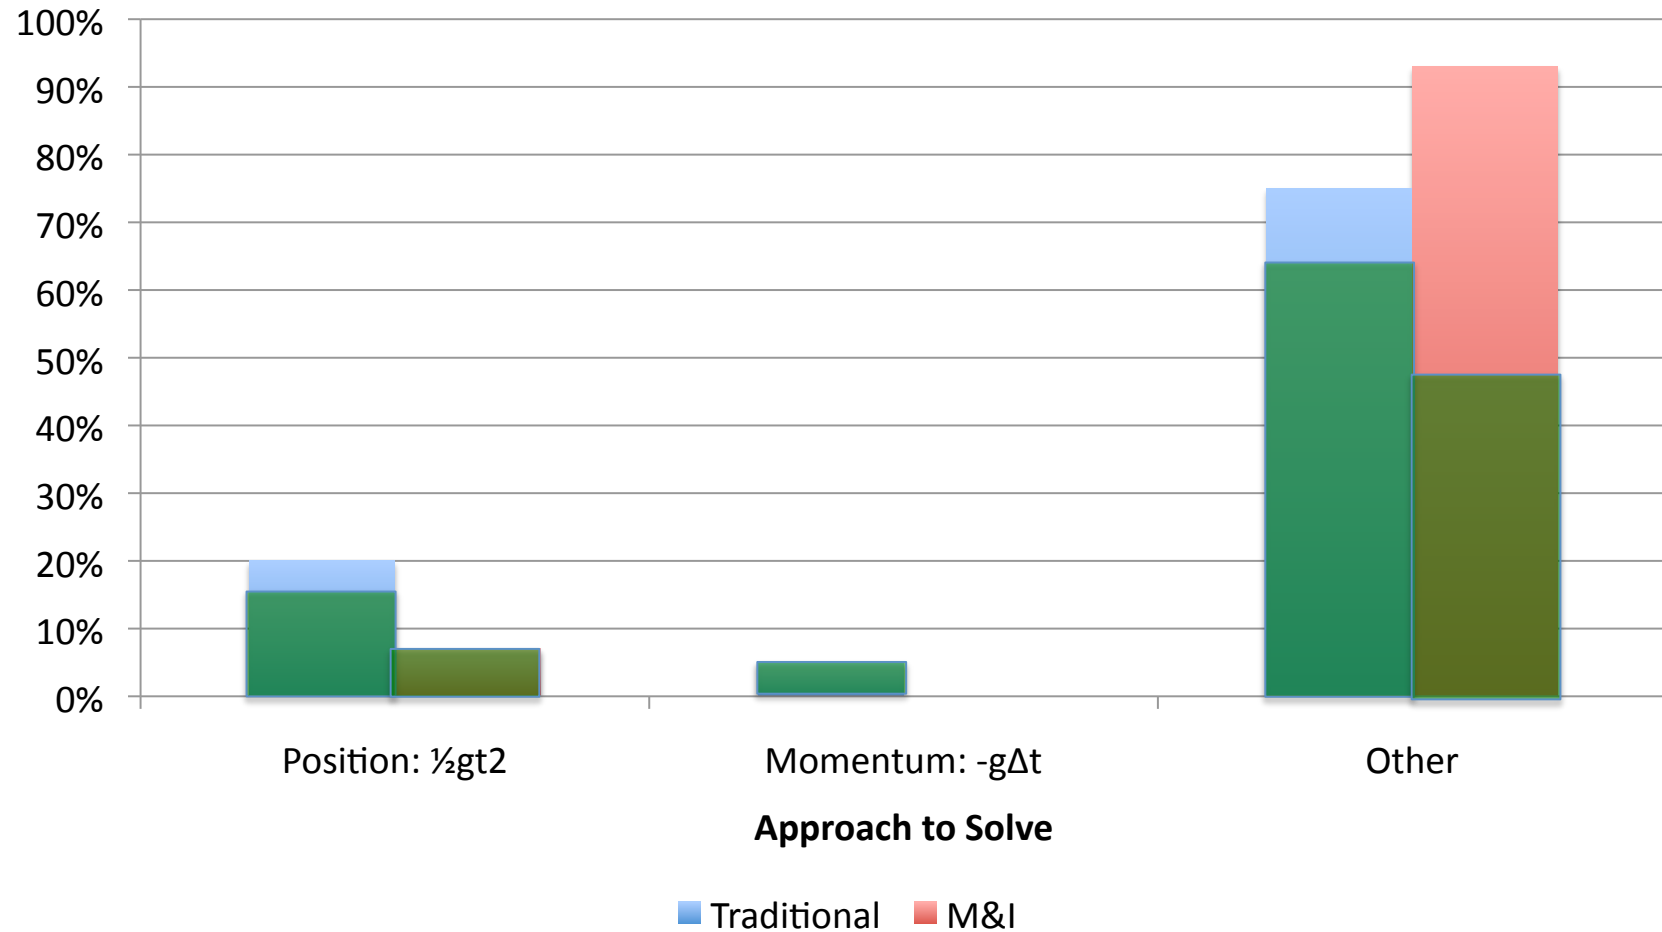

Metal balls ( $m_1 > m_2$ ) dropped,  
Time to reach ground...

# Apriori Analysis

Metal balls ( $m_1 > m_2$ ) dropped,  
Time to reach ground...

# Apriori Analysis

Metal balls ( $m_1 > m_2$ ) dropped,  
Time to reach ground...

Metal balls ( $m_1 > m_2$ ) dropped,  
Time to reach ground...

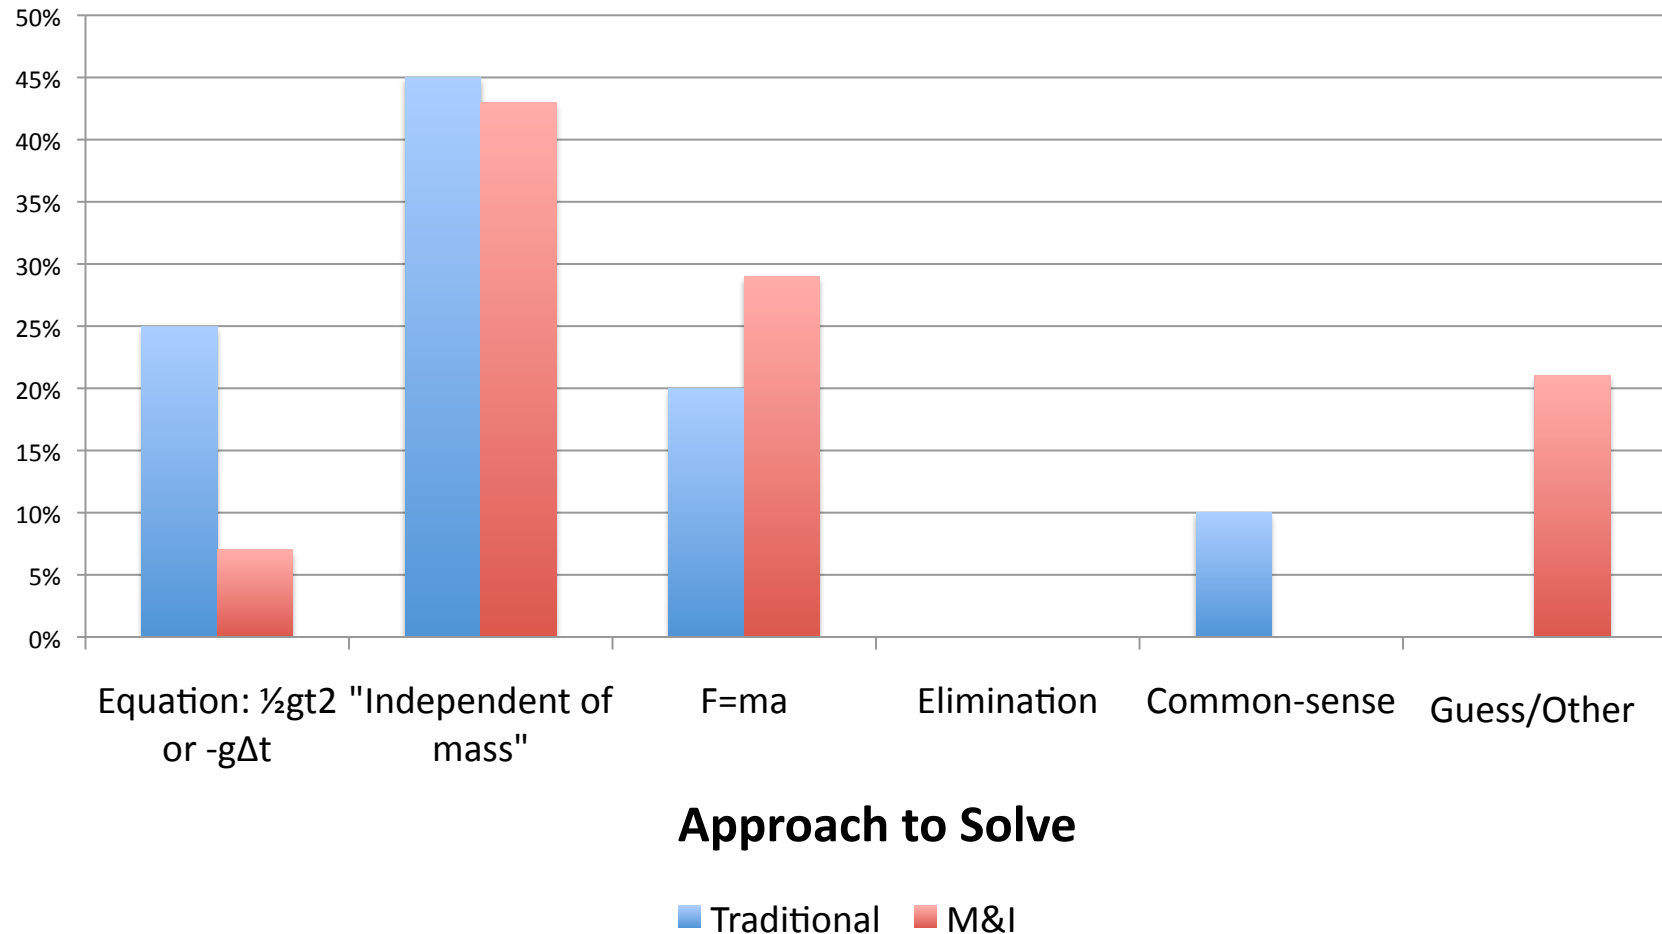

Metal balls ( $m_1 > m_2$ ) dropped,  
Time to reach ground...

Metal balls ( $m_1 > m_2$ ) dropped,  
Time to reach ground...

# Post hoc Analysis

Metal balls ( $m_1 > m_2$ ) dropped,  
Time to reach ground...

# Post hoc Analysis

## Approach to Solve

Traditional M&I

Metal balls ( $m_1 > m_2$ ) dropped,  
Time to reach ground...

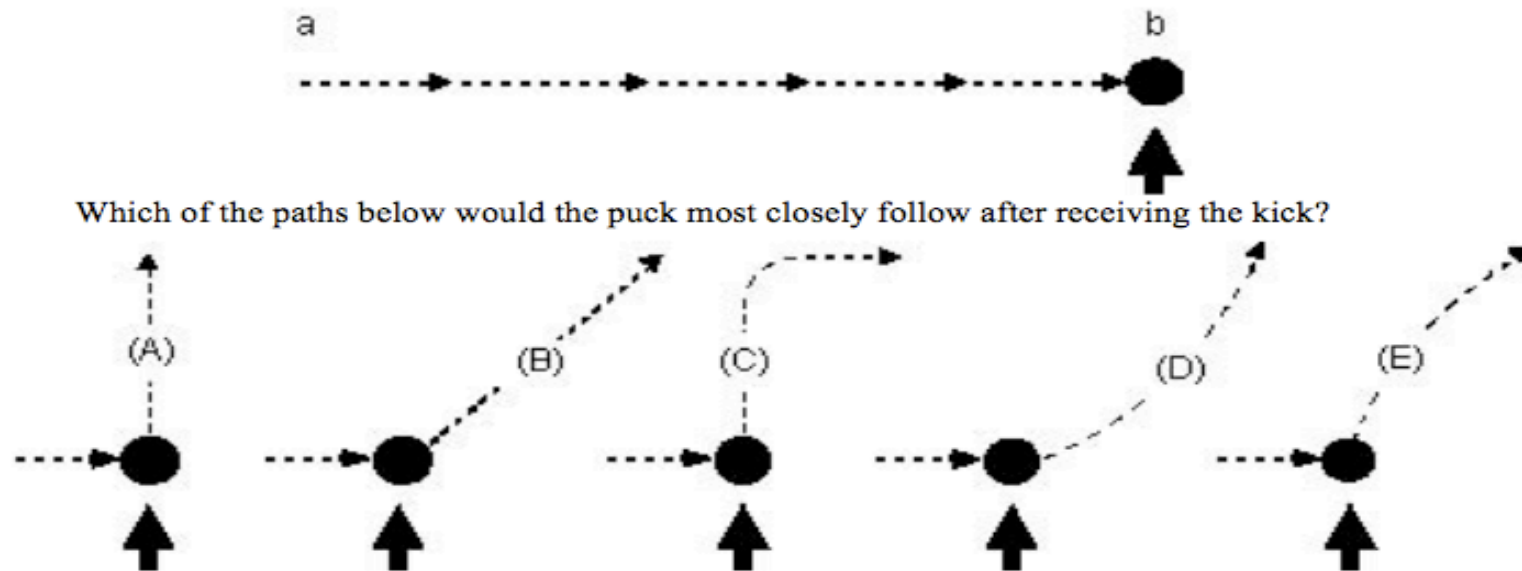

# Discussion

- Traditional students
  - Using correct approaches a bit more often
  - Get answers correct even with “wrong” approach
- M&I students
  - Even when using correct approach, still having trouble identifying answer
- Both
  - Many students seem to “know” the answer, but not exactly why

# Item #4

**USE THE STATEMENT AND FIGURE BELOW TO ANSWER THE NEXT FOUR QUESTIONS.**

The figure depicts a hockey puck sliding with constant speed  $v_o$  in a straight line from point "a" to point "b" on a frictionless horizontal surface. Forces exerted by the air are negligible. You are looking down on the puck. When the puck reaches point "b," it receives a swift horizontal kick in the direction of the heavy print arrow. Had the puck been at rest at point "b," then the kick would have set the puck in horizontal motion with a speed  $v_k$  in the direction of the kick.

Moving puck kicked,  
what is the new path?

# Response Fingerprint

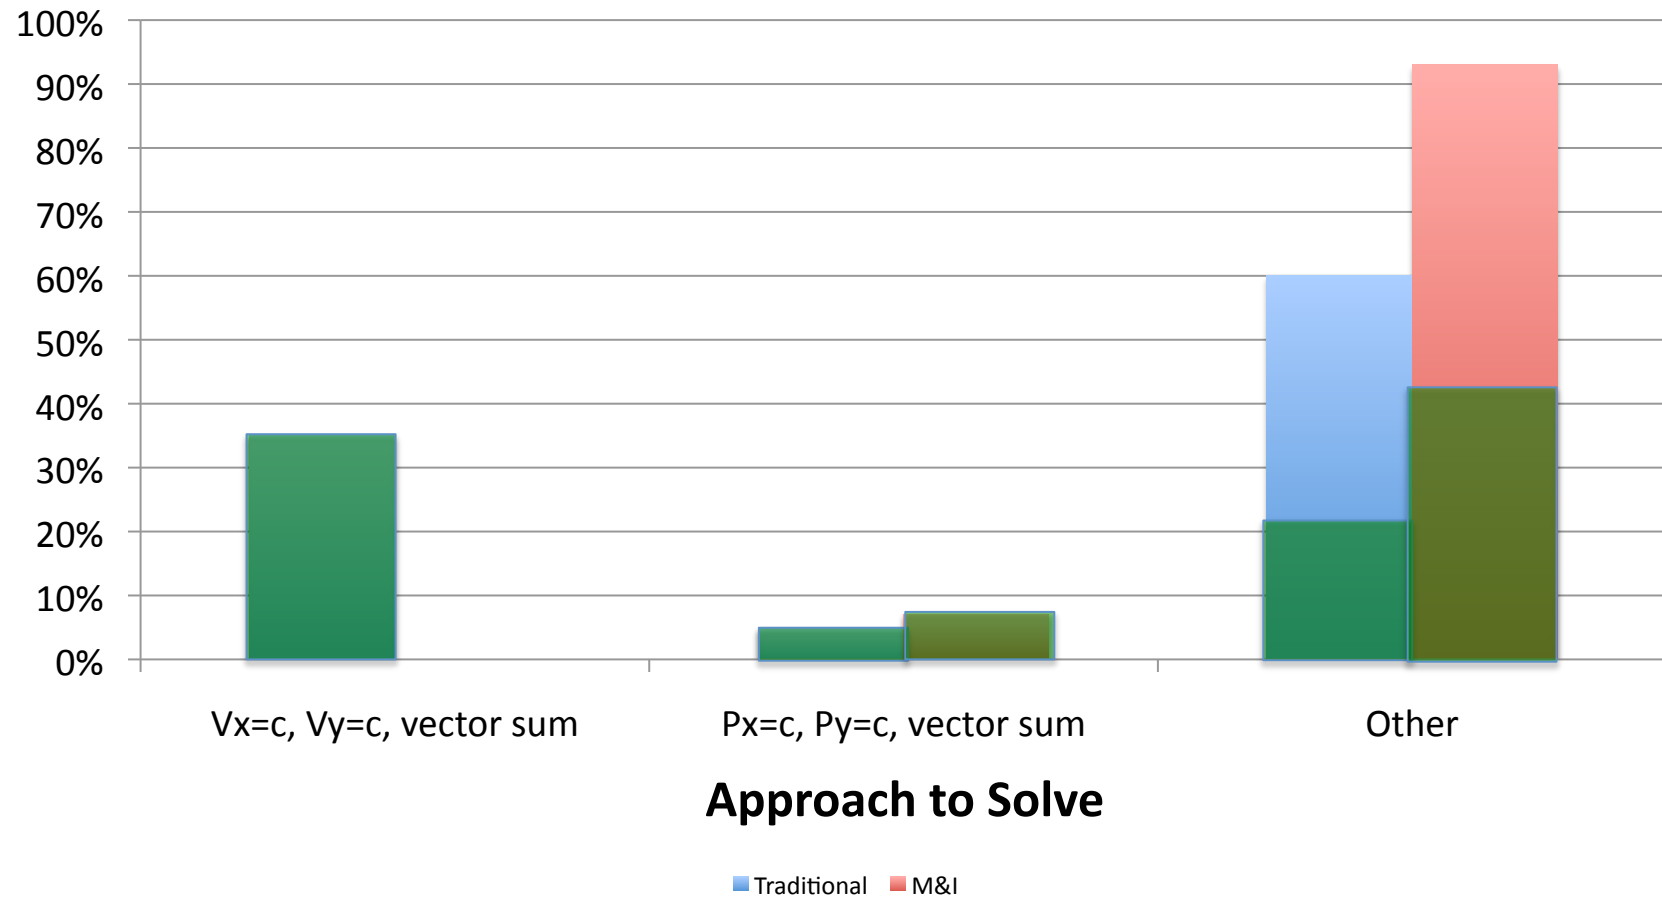

Moving puck kicked,  
what is the new path?

# Apriori Analysis

Moving puck kicked,  
what is the new path?

# Apriori Analysis

Moving puck kicked,  
what is the new path?

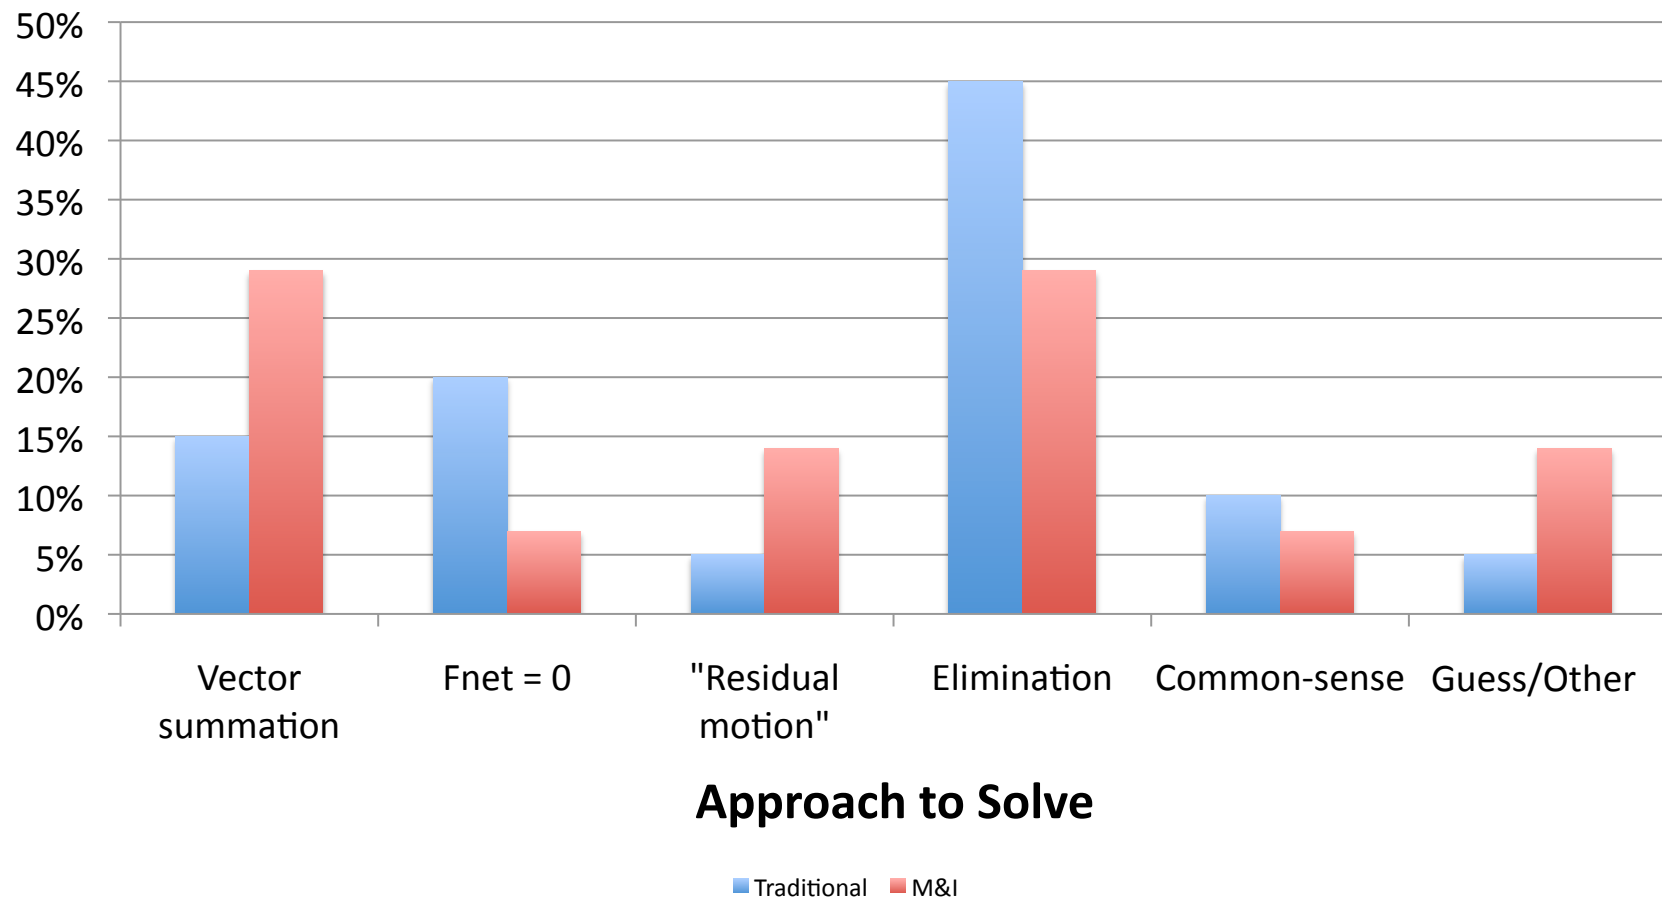

Moving puck kicked,  
what is the new path?

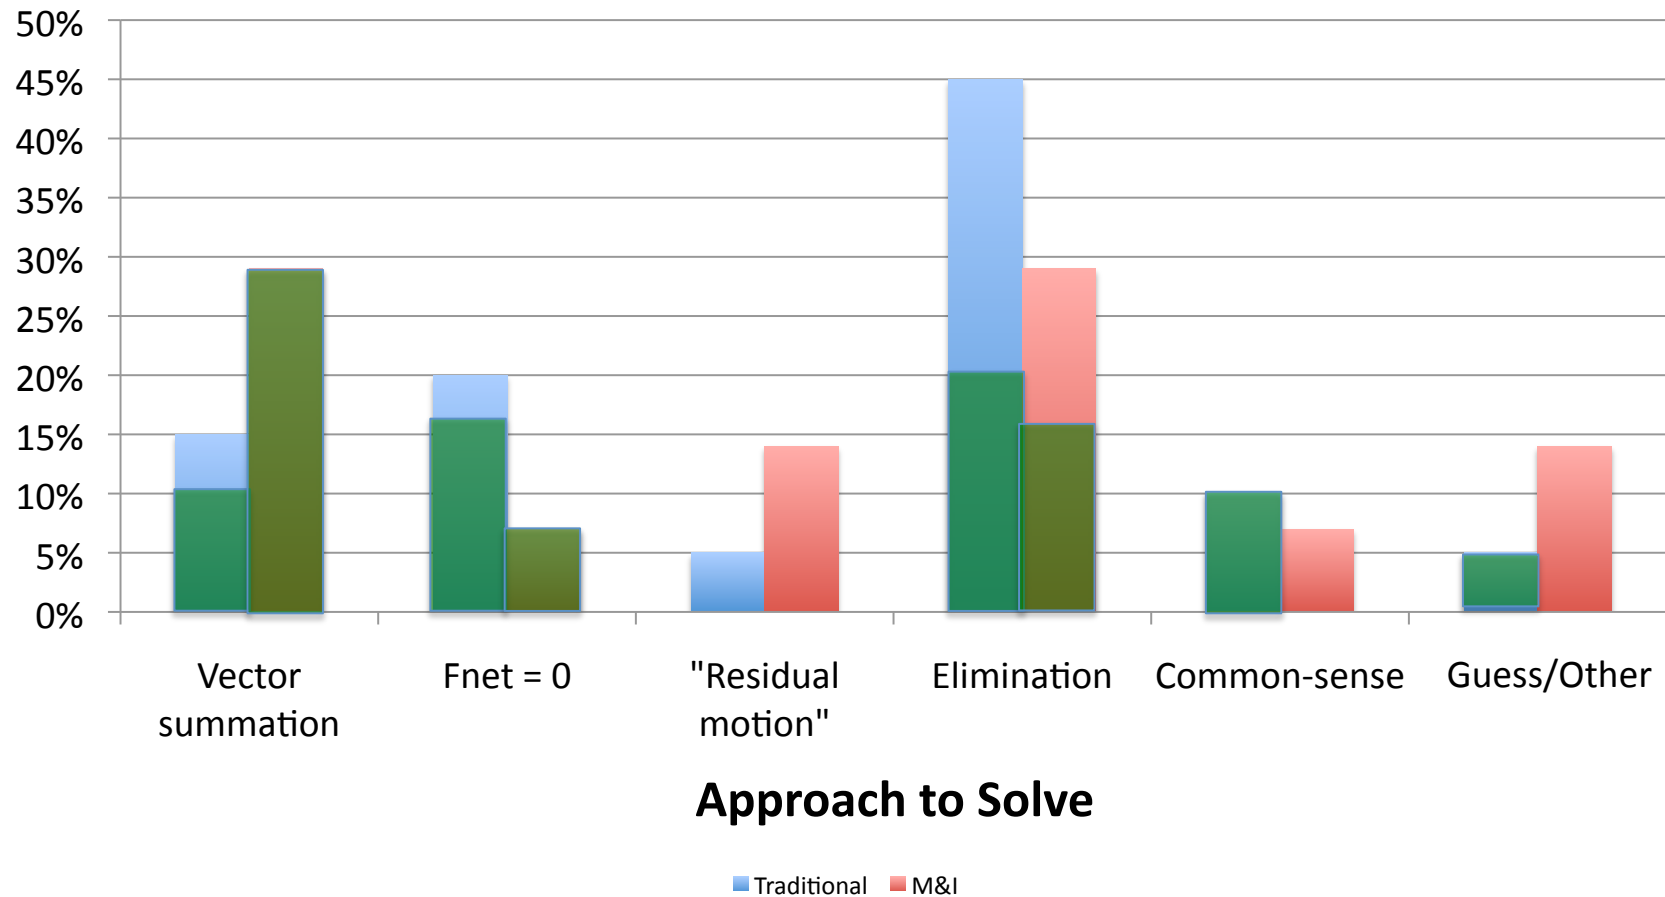

Moving puck kicked,  
what is the new path?

# Post hoc Analysis

Moving puck kicked,  
what is the new path?

# Post hoc Analysis

Moving puck kicked,  
what is the new path?

# Discussion

- Both
  - Greater spread across types of approaches
  - Elimination used often, poor performance
- Residual motion
  - Many try to describe, unsure of why
  - Zero correct responses
- M&I
  - Vector summation used more often, works well
- Traditional
  - Focusing heavily on elimination

# Summary and Future Direction

# Conclusion

- Current analysis
  - Traditional students seem have more success with more approaches
  - M&I students seem to be trying to apply approaches incorrectly
- Further coding of data
  - Review other questions in detail
  - Analyze for trends in multi-part questions
